

Project description

The goal is to make a “Choose-Your-Own-Adventure” story using code. First, a story that follows the 12 steps to a hero’s journey needs to be chosen or written. Then, a tasklist is to be made, which will detail the steps needed to take to accomplish our goal. Then, a flowchart, or series of events and choices, needs to be made for both the story and the code. Next, thorough planning of how to code the story needs to happen. Then, the coding can commence. There needs to be at least 3 starts and endings to the story, with branching points strewn about in the middle. The code needs to be explained throughout using comments, and not use prompts and alerts to convey or take in info. A daily journal of progress for the story should also be kept.
